THIRTEENTH MONTHLY CROP REPORT

(Issued by the Department of Agriculture, Edmonton, Alberta, October 17th, 1931)

Since October 9th, warm bright weather has prevailed throughout Alberta and during the past week excellent progress has been made with threshing. In the Peace River district about 80 per cent of threshing has been completed, and a large part of the grain remaining has been stacked. In northern Alberta threshing is everywhere progressing rapidly. The amount completed varies from 15 to 50 p.e. with an average of about 40 p.e. In the central part of the Province about 75 p.e. of all grains are threshed while in the south threshing has been completed for some time.

In central and Northern Alberta and the Peace River district a considerable percentage of early threshing wheat graded tough. At present however, practically all wheat is receiving straight grades and if present weather conditions continue, the percentage of the total crop grading tough and damp will be comparatively small. A large percentage of the wheat being marketed at present grades No. 1 and 2 northern.

Yields reported at various points indicate that the Federal Bureau of Statistics estimate of 17.5 bushels per acre throughout the province will be sustained. Lacombe reports yields of from 30 to 75 bus. of wheat, 50 to 100 bus. of oats and 30 to 60 bus. of barley.

At Vermilion the estimated average yield of wheat is 30 bus. per acre and in the Peace River district an average of 20 bus. of wheat, 40 bus. of oats per acre are being obtained.

The greater part of the potato and root crop has already been harvested and excellent yields and good quality are reported. On the irrigated districts threshing of sweet clover and

News Notes

CAPITOL TONIGHT — RUTH CHATTERTON in the "RIGHT TO LOVE."

J. D. and Irving Hall were Lethbridge visitors on Saturday of last week.

Mr. and Mrs. Percy Poulsen were visitors at Magrath on Monday of this week.

D. B. Wilcox, Homestead Inspector of Lethbridge, was in Raymond on Tuesday of this week.

George Brewster's Coupe was hit coming from Magrath Saturday night and fender bent some but no one injured.

A good crowd saw "Scarlet Pagen" at the Capitol Monday night and the ladies received their usual gift of useful and beautiful Ivoryware.

CAPITOL TONIGHT — RUTH CHATTERTON in the "RIGHT TO LOVE."

Police Magistrate J. W. Low of Cardston, and Constable Wm. Ellis of Magrath were in town Tuesday on official business. Several cases were heard.

The rains and the warm sunny weather have started the vegetation growing again and will make winter pastures a great deal better than otherwise.

Order those Christmas Cards today. We can give you a cabinet of Stationery FREE with each order for 25 or more cards between now and Nov. 15. The offer must be withdrawn then. ACT NOW. We make delivery when desired.

EXPERT OPTICAL SERVICE

MR. A. MELVILLE ANDERSON, OPTOMETRIST, of Anderson and McLern, Sight Specialist, Calgary wishes to announce his regular visit to the RAYMOND PHARMACY on THURSDAY, NOVEMBER 5th. EYES EXAMINED. GLASSES FITTED.

A lot of folks think that begging is an easy way of getting a living, but we'd like to see them try it for a couple of weeks. We have yet to envy a beggar.

CAPITOL TONIGHT — RUTH CHATTERTON in the "RIGHT TO LOVE."

Axel Isberg is dead and Mrs. Harry Hobert is in the Granum Hospital recovering from injuries sustained when Isberg's coupe in which they were riding and which Mrs. Hobert was driving got out of control and tipped over on the Willow Creek Hill near Vulcan.

The Japanese freighter Yonan Maru and crew of between 40 and 50 was given up for lost on Monday when all that could be found of it by searching ships was a portion of its deck load of logs.

When a man in Ottawa bought a picture at an auction sale for a \$ last week he made \$89. Noticing the frame loose when he got home he was going to tighten it up and clean the picture, and he found 7 \$10-bills in the back of the frame.

Alfalfa for seed is well advanced. About 80 percent of the beet crop has been lifted. 45,000 tons are now stored at the Factory at Raymond and large quantities are still at farms awaiting shipment. The sugar content is reported to be high, and the Sugar Beet Factory is operating at full capacity, cutting 1050 tons of beets daily.

Pressure conditions in all parts of the Province with the exception of the east central and south-eastern districts are excellent. Late rains in the south-west have considerably improved pastures and made fall plowing possible. In all probability a considerable acreage will be fall ploughed on the irrigated area. Practically no fall plowing has been done to date outside of these districts.

Mrs. Gehmlich Laid to Rest

The Second Ward Chapel was well filled with sorrowing friends and relatives on Sunday last who assembled to pay their respects to Mrs. Anna Gehmlich who passed away Tuesday evening at the Galt Hospital following an operation for goitre. She had been in Canada about 2 years. She emigrated with her three children her husband preceding her to give to the grave by about 10 years. She was a woman of a kindly disposition and had always been a friend to all and especially to the Pjers, when they called at her home in the city land.

Bishop James H. Walker took charge of the services; the singing was under the direction of Charles P. Strong, and Mrs. Blanche Seoville rendered a vocal solo, "Abide With Me."

Speakers at the services were Frs. T. S. Allen, Jas. S. Anderson, Wilfrid A. Heninger and Carl Schneider, who all paid high compliments to the deceased and her splendid family, all of whom had been sincere and active Church members and in their native land particularly active missionaries.

On behalf of the family, Bishop Walker thanked all for their thoughtful gifts and kind acts during the illness and after, to the bereaved and sorrowing children.

Burial took place at the local cemetery with Christensen Bros. of Lethbridge in charge of the body.

Biographical

Mrs. Gehmlich was born May 23, 1880 at Sebastiansberg, Bohemia Austria. She was married in 1893 and lost her husband in 1912 at Chemnitz, Saxony, Germany. She raised three boys, Karl, Fritz, Heinz and one daughter Elizabeth. Three boys died as children.

Mrs. Gehmlich was converted by a missionary and accepted the true Gospel in 1913 and she was a faithful member till the end. Her life was one of continued suffering and sacrifice. She was a mother for the missionaries, always willing to help them. She was an energetic and diligent worker in the vineyard of the Lord converting more than thirty souls to the Gospel, many of whom are now residing in Canada and the United States. She was also 1st Counsellor in the Relief Society for a number of years.

She is survived by the children as well as one brother in Salt Lake City Utah, who was here for the funeral. Three sisters are also living in the old land (Germany).

PHOTOGRAPH GALLERY FOR RAYMOND

J. E. Atterton, Jr., of Cardston has rented the room next to the Recorder Office, and as seen necessary alterations and decorations are made he will open up an up-to-date photograph gallery therein.

Mr. Atterton has been working for a number of years with his father in Cardston and is well qualified to give Raymond and district efficient and satisfactory service in Amateur Finishing and Portrait Work, and this service should be a real asset to Raymond people. Amateur developing will also be entered to with a very snappy service on this kind of work.

Work on the interior of the room is in progress now, and an opening announcement will be made very soon. Watch for it.

Sunday was a perfect Indian Summer day. We can stand a lot of them.

CAPITOL TONIGHT — RUTH CHATTERTON in the "RIGHT TO LOVE."

Cleon Rolison and party were at Tyrrell's Lake and Wrentham on Sunday.

CAPITOL TONIGHT — RUTH CHATTERTON in the "RIGHT TO LOVE."

Marion Palmer, who was injured recently at the Factory was taken to Lethbridge on Sunday for some X-Ray photos of his back.

GROWING, SELECTION AND PREPARATION OF GRAIN AND SEED FOR EXHIBITION

(Copyright 1931)

By Herman Trelle

ARTICLE No. 6

HOW TO SHRINK AND HARDEN A SHOW SAMPLE OF SEED

When the exhibition seed is completely threshed and separated into one mass, bulk sample and when we begin the further processing of the selected seed, we shall have rounded the corner, passed the middle mark and are away for a good start down the home stretch to a completed World Show exhibit.

For best results and conservation of time and labor, this last, most controlled stage should be systematically divided and executed into four progressive steps, in the following order: first, the further shrinking, hardening, moisture reducing and unifying steps; second, reducing the volume of the sample by uniforming the size and shape of the seeds by the use of screens and other simple methods and appliances; third, selecting the best three when the sample is ready for hand-picking; and fourth, the final setting and finishing of a beautiful sample.

By this systematic procession which adapts itself harmoniously to nature, the writer has done away with most of the drudgery of useless hand-picking, etc., etc. In a few words this system resolves itself into reducing the exhibition sample from a carefully constructed larger volume of quality seed, and NOT the illusive idea that it is possible to hand-pick, for example, the 900,000 individual kernels to be found in a fifty pound World Show sample of wheat from an unknown mixture. This foolhardy stunt just can't be done. A little simple arithmetic (at the rate of 20 kernels to the minute) coupled with ordinary rules of health and human error should dispel the illusive idea of attempting such a practice, not to mention the reaction of nature's elements on the seeds as they are being so slowly and openly handled and dangerously exposed.

It is the natural tendency of all seeds to shrink when once they become dead ripe, and the more nearly perfect a seed is, when it is dead ripe, the less the outline shape or contour will change, as the natural process of shrinking (mostly a reduction in size due to loss of moisture) and hardening show a smooth, plump outline. A hardness one can be assured of a more the same symmetry will be retained in the kernel as it gradually dispels its excessive moisture, reduces its size and becomes very hard; but, on the other hand, if a wrinkle, or a dent, or an open twisted crease develops early, and before the kernel shows hardness one can be assured of a more and more distorted shape developing as the wheat kernel becomes hard and harder. Rye seed or the barley will however, show a wrinkle from the very beginning of ripeness, but the finer and more silky the wrinkle appears the plumper and more attractive will be the development of the seed. Oats continue to show a broad, straight, smooth, and well opened vent or bosom held snugly against the inside seed by a tight fitting shiny hull of fine texture. It has every promise of turning out to be an attractive sample. A top sample of peas (other than canners) should have a bright skin capable of taking on a high polish without showing a trace of wrinkle or blotch. Therefore, should a raising or loosening of the skin be apparent, one may safely conclude that perfect maturity was interrupted by nature or man. These few examples will stress the paramount importance of hardness, coupled with maturity. In more detail further indications of quality and attractive appearance will be discussed by the writer in a later article.

This shrinking and consequent hardening will continue providing the sample is kept in a favorable, cool to warm temperature and dry atmosphere until a natural balance (point of equilibrium) is reached between the seed and the surrounding temperatures. And, right here, is important to know that the natural air in Western Canada's grain growing areas is always dry and agreeable to the processing of grain as long as the weather is clear, but with a drop in temperature below what feels cool, or a damp moisture condition, one must resort to artificial protection, for exhibition seed, to compensate this harmful change. This can always be found in one building or another on any farm. Therefore, at this time, it is at once apparent that the prize bulk seed must be placed in contact with healthful air in order to attain the best natural balance which will not mar the seed's attractiveness or germinating properties (vitality) immediately after it has been separated from the mother plant.

If mother nature had her choice, however, she would not process the seeds any further, but hold her seed fair right now at this time, in the natural open-air, when the seeds are in their natural state and not interfered with by man. But man is artificial and decides to show nature's products in artificially, unnaturally reduced masses, assembled together for comparative judgment, in an unnatural "hot house" show room. In order to meet this artificial condition in the healthiest and best possible way, man must resort to further artificial means, in order to further reduce the moisture content, and further shrink and harden the prize bulk seed to a point of equilibrium that will harmoniously adapt itself to this unnatural show room condition.

After years of experimenting, and testing and making mistakes, the writer has found that there is no more atmospheric condition to be found economically better adapted than the normal, healthful home, or any building in which the temperature can be controlled around 70 degrees F., in which to complete the processing of show samples, and in which to "fix" them so that they will stand up to the best advantage under their artificial show room demands. Remember, World's Show samples will be exposed under observation and of the exhibitor's control for five months before the final awards are made; and Regina's normal temperature and atmospheric condition can safely be considered DRY, and really warm during this period.

Proceed as follows, and considering the information in the previous articles, the following methods can safely be applied to every seed listed in the World's Show prize list. Take the bulk, wind separated seed and divide it into clean, strong common grain sacks. Securely tie each sack after filling them about half full of the larger, coarser seeded varieties (wheat, barley and peas) and more than half the quantity of the smaller seeded varieties (timothy, clover and alfalfa). Stand all the sacks side by side in the coolest place in the house. A good, dry cellar is O.K. Do not pile the sacks one upon the other.

Spread a cover over the whole assembly so that there will not be a too rapid rise in temperature. Next day move the sacks into a normal temperature where you intend to work on them. Reverse the sacks by turning them upside down, and again cover them for a day. After this the cover may be left off, but at least twice a day, and at regular intervals shake the sacks and reverse them. As this regular reversing process continues the seed is slowly, safely, surely and gradually shrinking and hardening more and more, while the moisture content is becoming less and less, and approaching nearer and nearer to that of the dry surrounding atmosphere—a comparative condition to that of Regina's massive World's Grain Show Room.

There is absolutely no danger of damaging the exhibition sample if this somewhat monotonous, rhythmic reversing process were to go on indefinitely, but a break must be made to reduce the volume of the sample and begin building up the finished show product. So, in about a week the kernel will have safely reached a hardness when one can plan reducing the volume to at least half, but no less than twice the volume of the final sample, by a quick screening process.

Alberta Made Goods

The local organization, because of the present economic depression are anxious to bring to the attention of the buying public the brands of goods manufactured in Alberta and make practical application of the slogan "Buy Alberta Made Goods."

Our buying at home has a tremendous effect on the industrial prosperity of our towns and provinces. Every dollar spent at home means employment for Canadian workmen.

During the drive from Oct. 23, to Oct. 30th for "Alberta Made Goods" we ask that you note the display in local store windows and the special exhibit put on by the Women's Institute acquaint yourself with the various brands manufactured in Alberta then get the habit of asking for these particular brands of goods and by purchasing these goods you will keep the money circulating at home and provide employment for Alberta people.

"Canadian Industries is a branch of Institute work that has been stressed for many years by W. I. Workers; a great deal of valuable information concerning our Canadian industrial development has been given to the women.

A. J. MACPHER, POOL HEAD, DIES SUDDENLY

Regina, Sask., Oct. 21—A. J. MacPhail, president of the Sask. wheat pool, died very suddenly early this morning after three weeks illness in Regina General Hospital.

Mr. MacPhail died from a blood clot forming in the blood stream probably striking his heart. He was improving, it was thought, up to late last evening when friends called at the hospital to see him, and it was expected that he would be leaving hospital today.—Leth. Herald.

REPORTS IMPROVEMENT IN RURAL COMMUNITIES

General improvement affecting all avenues of rural life is reported in Western districts entered in the Competition of the Canadian National Railways by Dr. W. J. Black, Montreal, Director of Colonization Agriculture and Natural Resources for the railway company, who this week returned east after assisting judges in the competition on their final inspection tour of municipalities that survived the preliminary judging.

WORLD-FAMOUS INVENTOR PASSES IN SLEEP

Thomas Alva Edison Succumbs to Illness After Amazing Fight For Life.

WIZARD OF MENLO PARK MOURNED BY MILLIONS

By Theodore F. Koop

WEST ORANGE, N.J., Oct. 19—Thomas A. Edison in death received today the homage of the millions for whom he had made life more comfortable.

The body of the 84 year old inventor, who died at 3:24 a.m. Sunday, lay in state in the library of his laboratory.

After a private funeral Wednesday at his Glenmont Estate here, Mr. Edison's body will be taken to Ohio, for burial near his birthplace.

President Hoover hoped to lead from Washington Wednesday to stand at Mr. Edison's bedside as a personal friend and as head of the nation. Meanwhile, in the Forth and Harvey Firestone inventors two "old cronies," bested to West Orange.

Mr. Edison slipped quietly from a deep coma into a lasting sleep Sunday morning. Lying his head was Mrs. Edison, for 45 years his constant companion. At the bedside were his six children.

After his death Dr. Hobart S. How disclosed that Mr. Edison on learning that recovery was impracticable, did not desire to live. His life work done, he did not wish to place an invalid's burden on his family, he said.—Leth. Herald.

BUY AT HOME WEEK AND
MADE IN CANADA WEEK

We have recently heard considerable about buying "Made-in-Canada" goods. Also, "Made-in-Alberta" goods. But we have not heard very much about buying these goods at home. We think this point should be stressed just as much as the others, if not more, for after all, the fact of doing our buying at home is the thing that will make for a bigger and better Canada.

Right now we could do with double the population of the Raymond district. It would be a big boon in almost every way. Added population to the town and district would mean added public utilities, more schools, etc. and we would be in the position to have the benefit of a national fair. Again, added population would be a driving card to new industries. Many industries would mean more business in circulation in the town and district. All these problems, while they may be civic problems, are also individual problems. In some the individuals of the community make up the spirit of and in fact, the community.

So much for that. Now how are we going to make our district bigger and better? There are many ways, one is to create a public consciousness that will make us feel, Raymond and Raymond first. This means that we will be for our town and district heart and soul and will have everything that will make it better. This means a part for our local business houses and professional men, but in the wholesale and retail business, as a matter of fact, it means that we will play the game square with our fellow citizen in every aspect of trade and business.

Too, this makes quite a problem for all of us. It means that we must have an ethical faith and a confidence in each other. When prices are made we must plan to keep them, and when statements are made regarding quality, price, standards, etc., they must be true. To the business man who is catering to the public, this means a competition with city prices and services, coupled with value for the dollar, and when these things cannot be given, then it is a fair price that must be expected as a natural consequence of the spirit of the times. To the buyer it should imply a change, first for the local merchant to supply your wants. If merchandise he appears to be indifferent to getting what you want as soon as possible and at a price that is fair, then our dearest may be pardoned. This is a resolution that must work both ways. The responsibility of the buyer is that home does not end until the local merchant has had a chance and the responsibility of the merchant does not end until the buyer has been treated courteously, and every honorable endeavor made to get what is wanted.

Then there is another angle to this. The revenue season of the man on the land is just passed. Cash has come into his pockets, not much perhaps, but at least some. Now, Mr. Buyer, where is that money being spent? If you have sent it away for the necessities of life that could have been purchased here, you have wronged your fellow townsmen. You say you will that cannot be paid, and very likely along with all the rest of us you do. But why do the man who has so kindly obliged you and spend all your dollars somewhere else. He knows returns have been disappointing, in fact it is brought home dozens of times each day to him. Why not pay him a few dollars on account and then if necessary get a little more credit. It is our belief that if this game were played honestly, that no one would be refused. We have abused it a long time, we have made the retailer the goat for years, until it is not to be wondered at that he doesn't swallow all of our tales and break his neck to give us the opportunity to fleece him again.

This of course doesn't go for all. But in a weakness with for too many of us. In this season when dollars count so, why couldn't we give our local merchants a break? Give them a few dollars on account and a chance to get a few more if they need, the competition we think they should. All or any of them will ask that if any of them will ask is a square deal, and any honest person is always willing to see that his fellowman in business gets that.

Let's ALL buy Made-in-Canada

News Notes

SUBSCRIBE to the RECORDER.

L. Carter was a Lethbridge visitor on Friday of last week.

There reports Cardston and district has had quite an epidemic of broken arms the last couple of weeks, 10 or 12 cases being reported.

Mr. and Mrs. L. J. May and children and Miss G. James, very Cardston visitors on Sunday. Mrs. Rhoda May returned with them for a few days visit with her son and family.

Mrs. Geo. Stead of Calgary was killed near Vulcan when a tire blew out and the car turned over in the ditch as they were on their way to Champion Friday night. She lived through the night but died Saturday morning.

T. O. King and Mrs. Reva Ross attended a meeting of the Leth. County U.F.W.A. executive in Lethbridge Tuesday evening. The business of the meeting was arranging the date and program for the annual convention. The date is November 29th and the principal speakers the Hon. Wm. Irvine M.P.; Mr. John Johnson and Mrs. Marie Malloy, organization director. Several musical numbers will be furnished by the Raymond Local.

Here and There

A little sugar and maple syrup produced in Canada is being sold in Lethbridge at a reduced price of 10 cents per gallon. The local agent for the product is the Lethbridge branch of the Canadian National Bank.

Following a long and arduous campaign in an extensive campaign, a new and better beef, the bulk of which is for Lethbridge, is being sold in Lethbridge. The product is a Canadian beef, raised in the Atlantic and Pacific provinces.

The hands of Lethbridge recently "lost the clock" on their way to the summer grounds in the upper reaches of the St. Lawrence River, Quebec, when they used the railway. It is the Canadian Government Department of Fisheries to overcome the timing waters at Saint John.

With the departure on October 1 of the Lethbridge mailman plane for Regina, the Pan-American Airways concluded their service between Lethbridge and Regina which was inaugurated August 1. In August 7 passengers were carried on the southbound trip and 17 northbound in 15 flying days.

Machine's breaking was practically complete for 1921 in the first week of October, according to the weekly crop statement of the Canadian Pacific Railway department of agriculture. Saskatchewan was then 11 per cent, broken and Alberta 55 per cent, with northern areas in each province still having heavy crops ripening for the machines.

The Hon. the Earl of Rosebery, Governor-General of Canada, together with his eldest son, Viscount Duncan, have in view hunting and fishing trips in New Brunswick next year. During his recent visit to the province, the Earl was presented with a complimentary hunting and fishing license by Hon. C. D. Richards, Premier of New Brunswick.

Completion of organization work of the Dominion Agricultural Credit Company was announced recently by P. W. Beatty, chairman and president of the Canadian Pacific Railway, who stated that "subscription is over sixty per cent of the capital stock of the company have been received and the requisite steps to complete the organization have been taken." Head office of the company will be in Regina.

The new dental car, built by the Canadian Pacific Railway and equipped by the Lethbridge, Ontario, Chapter of the L. O. D. B. is intended for use in Northern Ontario to the Ontario Government recently. This car, equipped to be mobile on the continent, will have running rights over all railway lines in Northern Ontario and is equipped with fully equipped dental facilities, including X-ray, dental chair, and dental chair.

The number of Canadians who are part owners of the Canadian Pacific Railway is 1,000,000. A year ago, on September 2, the total number of the company's Canadian stockholders was 1,115,000. On September 1 of this year the number had grown to 1,217,000, an increase of 102,000 shareholders. Many of these have been added since the recent break in the security market. It is a fact that Canadians have confidence in the company's ability to "stand back" to prosperity.

CATCHING A MELODY

Friend: "So you have a new son whose features does he have?"
Father: "Well he has my eyes and my wife's nose, but his voice, I think, he got from the auto horn."

SHAVING THE CURVES

Cop: "Hey! You can't turn this corner!"
Sweet Young Thing: "Just make all these other cars get out of the way and I'll show you."

The most popular book yet to be written will be one for joy-walkers entitled "How to Run Over an Automobile."

TOO MUCH HEAT

"Having trouble with your car?" asked the inquisitive passerby.
"Certainly not," came the reply from underneath the car. "I just crawled under here to get out of the sun."

Lawyer: "Now my good man, are you sure this defendant is the man who stole your car?"
Identify: "Why, I was sure until you began your cross-examination. Now I'm not sure I ever owned a car."

Daughter: "Don't you love an evening like this?"
Paul: "Yes, but I generally wait until I get a little farther out in the country."

Mother: "No, darling, we can't afford a new baby brother."

Young daughter: "But, Mummy, can't we pick up a good used one somewhere?"

STILL THERE'S HOPE

Mother: "No, darling, we can't afford a new baby brother."

Why not give yourself a good present by subscribing to a good magazine. See the ad. in this paper.

If an increase in the number of wrestling and boxing matches are any criterion of the end of the depression then it is about over because a large number of these are already mooted in Southern Alberta compared to what we have heard of the past year or so.

The Foremost Board of Trade have forwarded a resolution to Edmonton to the Hon. C. L. McPherson asking for the gravelling of the secondary highway from Medicine Hat to Foremost through Lucky Strike Del Bonita and across the McIntyre Lease homestead country into Cardston.

The estate of Dwight W. Morrow, who died recently, has been estimated as being close to \$20,000,000 Mrs. Morrow is sole executrix.

There's no joking. The old car looks a lot better this fall than it would have done two years ago with wheat yielding 35 to 50 bushels per acre and worth from a dollar to a dollar and seventy-five cents a bushel. We seem to be seeing through different eyes entirely.

If the depression was half as bad as a lot of our talk would make it appear we would all have been snowed under long ago. Take old man opportunity by the forelock or whiskers or wherever you can get a hold and kill this hard time boy. Other districts are doing it, why can't we?

Canadian Medical Association

GRANT FLEMING, M.D., ASSOCIATE SECRETARY

ADENOIDS

Adenoids are growths which are sponge like in consistency, and which develop in the passage which joins the nose and throat. They occur at all ages, from early infancy to adult life, but they are most commonly found in young children.

The presence of adenoids is frequently responsible for what appears to be a chronic head-cold with a considerable discharge from the nose. The child who has adenoids will likely be bothered with a cold and sniffles during cold weather.

Because of the location of the adenoids, they may obstruct the Eustachian tubes which connect the middle ear with the throat. Adenoids are the most common cause of ear ache in young children. If the condition is not treated, it frequently leads to disease of the ear and permanent loss of hearing.

Breathing through the nose is the right and natural way to breathe. If the adenoids are large, the child will become a mouth-breather because their growth will block the nasal passage and prevent breathing through the nose. Certain serious results follow. To begin with the child has the uncomfortable feeling associated with a head cold.

Continued mouth-breathing, which means that the nose is not being used results in a high-arched palate and deformity of the chest known as "pigeon breast", and almost surely there is some disturbance of the proper, orderly arrangement of the teeth in the upper jaw.

In advanced cases, the child has a characteristic appearance—the adenoid face. The open mouth, the small pinched nostrils and thickened upper lip all give a fish-like, stupid appearance. The voice may have a nasal twang and in young children, bed-wetting may be a symptom.

The spangly adenoid growth provides an excellent breeding-place for germs. This is helped by the mouth-breathing which brings unprepared air into the throat and tends to dry out the tissues and so lower their resistance.

The child with adenoids may seem to be mentally dull, and this is not to be wondered at when it is remembered that his head feels stuffed up, his hearing is interfered with, he likely suffers from ear-ache, and he is quite possibly being poisoned by germs which are present in the adenoid growth.

Any child who is a mouth breather or who suffers from repeated colds or ear ache should be examined to see if adenoids are responsible, and if so, to have them removed. The sooner they are removed, the better it is for the child.

No child need suffer the handicap and danger of adenoids. Their complete removal is a simple surgical operation and is the only suitable treatment.

Questions concerning Health, addressed to the Canadian Medical Association, 184 College Street, Toronto, will be answered personally by letter.

Gordon S. Brewerton of Cardston was a visitor in town on Friday of last week.

Mr. and Mrs. J. M. Workman of Cardston were Raymond visitors last Friday.

Mr. and Mrs. T. C. McBeath left on Saturday to make their home in Calgary. Ralph Bros. took their household effects up in the big truck the same day.

Able: "Papa, I saved ten cents today. I ran all the way to school behind a street car."

Abe: "Why didn't you run behind a taxicab and save a dollar."

A professor says the respect children used to have for their parents fifty years ago is not in evidence today. Maybe it's because the old folks are so wild.

Interesting U.F.W.A. Meeting

The U. F. W. A. held their regular meeting in the Town Hall Thursday. The study for the month—Health—was adequately treated by Mrs. Della Woolf. The speaker stated that health is one of the most valuable assets of life yet it is valued lightly. At present the provincial government is spending 16½ cents out of every dollar spent for better health for prevention while the balance of the dollar is spent for cure. The province is doing everything in its power to educate the people to better ways of living that the general health may be improved. Prenatal and postnatal letters are sent out to every mother who will ask for them. The Alberta Mother's Book is free for the asking, and nurses are sent free of charge to any point in the province where a mother cannot get adequate care. The two health units now functioning in the province are bringing favorable comment from the centers where they are situated. In speaking of the health measures carried out in Raymond during the past year Mrs. Woolf mentioned the Baby Clinic, statistics of which have been previously published; the Dental Clinic sponsored by the U.F.W.A. where 64 children were examined for defective teeth, 53 were treated and a total of 148 fillings were placed. The results of the anti-Typhoid clinic put on by the Town Council was gratifying. It showed that the serum needle was used a total of 5,505 times on 1835 patients. Many who were unable to get to the clinic for three inoculations went to Dr. Leech's office so the final total is much higher.

Mrs. Zetella Taylor gave an interesting address on the Origin of Halloween, tracing its history from the pagan temples of the Romans thru the early Christian Era, down to the present time and showing that the pranks of the boys and girls of today are in contradiction to the original meaning of the day.

Announcement was made by the president of a prize to be offered the students of the 8th and 9th grades for the best essay on Peace. The essays to be in by November 10th and the prize essays (1st and 2nd) to be read in the U.F.W.A. meeting Nov. 19. This is being done with the co-operation of the principals and teachers of the two grades.

The meeting in November will be the annual election of officers and a motion was passed making all 1930 members eligible to vote.

W. D. L. Hardie, former Mayor of Lethbridge for a number of years has been named Superintendent of the new Terminal Elevator at that point.

Carl Erickson, a farm hand, was killed near Fincher Creek when the grain tank he was driving down a steep hill was thrown off the gear and his neck broken. He had only been out from Sweden 2 years and has a brother in Gleichen.

general results are satisfactory. Note worthy features are the bumper crop of high quality tobacco in Ontario, and the excellent after-harvest conditions throughout that Province which have made possible more cultivation at this season than in any previous year.

In view of its influence upon the exchange situation a brief discussion of foreign trade seems in order. The unfavorable visible balance of 103 million dollars for 1930 has since been reduced by about 50 per cent. In June the balance turned favorable for the first month this year and continued favorable in July and August. Taking the three-month period, June-August, there was a surplus in the value of exports over imports of about 5 million dollars as compared with a deficit of 30 million in the corresponding part of 1930. The September returns over a period of years show variable results, but usually Canada has a quite large favorable balance in the last quarter which, unless unforeseen developments of an adverse character intervene, should be repeated this year.—Bank of Commerce Monthly Commercial Letter.

The Raymond Athletic Association are holding a dance on Halloween night. Watch for particulars.

The two year old child of Mr. and Mrs. Amasa Bullock was very ill the latter part of last week with cholera infantum. Medical assistance prevented a crisis and the boy, while not yet well, is improving nicely now.

The meeting of the Provincial Executive of the Basketball Association will be held in Calgary on Oct. 31. As this is an important meeting it is quite likely that someone from Raymond will be there.

CLEANING, SELECTION, ETC.

less that will scalp the larger kernels off the top and most of the smaller and thinner kernels from the bottom of the mass sample. The usual wire and zinc screens found on the average farm may be used for this rough first screening.

In a later article the writer will give more detailed and exacting sizes and methods to use for the various important kinds of show seeds.

This "airing" of the sample has a tendency to help quicken the hardening of the kernels, after which no time should be lost in getting the reduced volume of seed back into sacks where the reversing process can AGAIN be safely resorted to, at least twice a day in order to further harden the skin and shrink the kernel.

Caution: Judging from observation at any major seed show, most exhibitors are inclined to be over-anxious. The processing and manipulating of beautiful seeds before the skin is in a condition to stand it has irreparably damaged what would otherwise have been a winning sample. Do not be too impatient in waiting until the seeds have reached a hard, "set" and uniform state when they may be safely manipulated in a more exacting and finished way.

This will be described in more detail in the next article.

GENERAL BUSINESS

CONDITIONS

The outstanding feature of the past month, marked fluctuation in the money exchanges, has caused some unsettlement in Canadian business owing mainly to the necessity for business interests to plan their future position with regard to debtors and creditors in other countries. This, however, is a temporary situation consequent upon such a sudden change in money values and does not foreshadow any more difficulty in the transaction of Canadian business than was the case under similar conditions a few years ago.

At the close of the most productive season of the year an account of the general results may be of interest, particularly as it appears that a slight seasonal expansion in trade is under way, and that this upturn commenced earlier than in most other countries.

Subject to certain qualifications, the state of business is fairly well reflected in railway car loadings, which for the elapsed part of the current year are 20 per cent. less than for the corresponding period of last year, although it should be noted that the short Western grain crops and the late marketing of these products have to be taken into consideration in comparing this year's figures with those of 1930. Domestic trade conditions are fairly well represented by the weekly figures of car loadings classified as "merchandise in less than carload lots" and "miscellaneous." Those for August increased quite substantially over July, and while this increase was not fully maintained in September the latest figures are a trifle above those of mid-summer.

The most recent official employment report compiled from returns made by over 7,000 employers shows an unusual, but welcome, position during July and August. In July 1930 employment in this group turned downward and a similar development occurred in August in all but one of the four years preceding 1931. This year, however, an upward movement took place in July and continued in the following month, although the total number of workers was the lowest since the autumn of 1928 and has probably been reduced during September. The rise during the latter part of the summer was due to a steady flow of new construction contracts; while the volume of these contracts is the smallest since 1926 there has been less than the usual fluctuation in the monthly placements, and those for September exceeded both those in August of this year and in September, 1930.

Industrial conditions have continued irregular, although in this branch of business also some unexpectedly favorable developments have taken place. The general trend of operations during the summer was downward particularly in iron and wood production; for instance, the August

output of pig iron was the smallest of any month since December, 1921; the production of lumber fell steadily in July and August to the lowest point of the year and to a level about 10 per cent. of that a year ago; and the sawmill industry operated at but 57 per cent of capacity in July and at 51 per cent in August. On the other hand, steel production in August was larger than in the preceding month, this increase being the first since April; automobile manufacturers also enlarged their production schedules, in contrast with their action in August, 1930; most textile mills have had a busy season, some being employed on an over time basis; and the output of the boot and shoe industry was, according to the July report, above that for the like month of last year.

In mining, the reports of coal production show a marked decline throughout the summer, and it is in this section that we find the greatest depression in the mining industry as a whole. Except for gold, the trend of production of which has been upward, metal mining has been curtailed some what, although apart from nickel the output of non-ferrous base metals has not fallen far short of that in 1930.

The results of fishing have been disappointing both as to catches and prices. On the Atlantic Coast the smaller than average landings are accounted for by a scarcity of bait and of the best marketable varieties of fish, combined with a disinclination of fishermen to operate their boats extensively under the present unremunerative conditions a situation that applies also to the British Columbia halibut industry. The salmon pack is only about one-third as large as that of 1930 but includes a substantial quantity of the best grade.

Except in respect of prices, which for the most part are so low as to permit only a small profit even to the most efficient farmers, agricultural developments since July have been mainly favourable. Having regard to the prolonged and widespread drought in the Prairie Provinces early in the season the first official forecast of the new grain crops, while showing yields about one-third less than normal, was encouraged as it was higher than private estimates previously issued. This comparatively favorable report results from the maturing without frost damage of the late-sown grains in the North which this year constitute a substantial part of the total output. Harvesting throughout the Prairies has been resumed following about two weeks of unsettled weather, in which period operations were at a standstill in certain districts. While heavy rains may have lowered somewhat the quality of unthreshed grain they furnished some of the necessary moisture reserves for next year's crops.

While the July drought, followed by excessive rains, damaged the crops in some sections of Eastern Canada, the

News Notes

Dr. and Mrs. G. W. Leech and Miss Watson were Calgary visitors on Sunday at the home of the Doctor's daughter, Mrs. Edward Wheatly, to see his new grandchild.

But digging is now about 90 per cent. finished and the weather still ideal for this kind of work. In the neighborhood of 90,000 tons of roots are in the sheds at the factory, which is about all that can be stored, and many farmers are siloing now on their farms, and piles are being made at some of the dumps because no more can be stored at the factory sheds. Never in the years the factory has been in operation has the weather been better for beet harvest and officials are more than pleased with the results to date.

Two large barns and ten head of champion stock on the Prince of Wales P. P. Ranch near High River were destroyed in a fire on Monday night which caused a loss of \$18,000 fully covered by insurance. Spontaneous combustion was given as the cause of the fire, and with a high wind blowing the crew at the ranch had their hands full saving the other buildings.

Mr. Melvin J. Ballard of the Council of the Twelve will be here for the November Conference representing "your" "Admission" ticket you get at the General Authorities. The dates are Saturday and Sunday, Nov. 7 & 8. be lucky who knows?

HUGH J. CANNON DEAD

Hugh J. Cannon, for a number of years past the managing editor of the Improvement Era, died in Salt Lake early this week following an operation. The details are lacking yet.

Mr. Cannon had lived busy and eventful life, and for the last 20 years or so had been a prominent official in the Church. For a number of years he was President of the Swiss-German Mission, and following that accompanied Apostle David O. McKay on his trip around the world visiting the missions of the Church, which occupied over a year's time.

On the death of Edward H. Anderson, some ten years ago, Mr. Cannon was called to take the editorial chair of the Improvement Era, which position he filled with honor, making the Era a real factor in church education. With the amalgamation of the Improvement Era and the Young Women's Journal, the magazine filled a dual purpose in the church, and maintained or even bettered the high standards it had previously obtained.

Mr. Cannon's death will be mourned throughout the Church because of his very timely and inspiring writings in the Era and other Church magazines and periodicals.

DON'T FORGET the big Carnival at the Raymond 2nd Ward on Nov. 4 and 5. It will be a big affair. With November Conference representing "your" "Admission" ticket you get at the General Authorities. The dates are Saturday and Sunday, Nov. 7 & 8. be lucky who knows?
